

National Weather Service Tallahassee, Florida

Significant Severe Weather Event Tonight & Tuesday, with Multiple High-Impact Hazards

Severe Weather Outlooks

- A significant severe weather outbreak is expected late tonight through Tuesday
- The first round comes tonight, primarily across the Panhandle and southeast Alabama. This would be along and south of a warm front, where conditions could be favorable for discrete supercells. If this occurs, tornadoes (some strong) and damaging winds of 60-70 mph would be possible. Hail up to 1 inch cannot be ruled out.
- The second round (main event) comes during the day Tuesday as an intense squall line races through our area.

- Overnight, the Storm Prediction Center upgraded the I-75 corridor of Georgia and the Suwannee Valley of Florida to an **Enhanced Risk (level 3 of 5)** for severe weather.
- *There is the potential for widespread damaging to destructive winds of 70+ mph with the squall line, in addition to embedded tornadoes (some strong).*
- Today is the time to prepare for this significant severe weather event unfolding tonight and Tuesday.

Forecast Non-Thunderstorm Wind Gusts

- Strong, damaging wind gusts are expected across much of the area outside of storms tonight and Tuesday.
- Wind gusts outside of storms are expected to reach 40-55 mph in most spots, though exposed beach locations could see gusts near 60 mph.
- Given wet soils, this could result in significant tree damage and power outages. Minor structural damage is also possible.

Forecast Rainfall Totals

- A widespread 2 to 3 inches of rain is expected through Tuesday, which could result in some localized flash flooding.
- Localized totals of 3 to 5 inches are possible.
- Several rivers could reach minor flood stage after the rain ends.
